

DMEDesk AI

BPO Outreach Strategy & Playbook

Prepared by Gulf Global Outsourcing & Prime AD Solutions

Confidential | May 2026

This document outlines the complete outreach strategy for positioning DMEDesk AI as a revenue infrastructure upgrade for DMEPOS suppliers across the United States.

1. Executive Summary

DMEDesk is a voice-first AI receptionist platform built exclusively for DMEPOS suppliers. Unlike generic AI voice bots, it is trained on industry-specific logic: HCPCS codes, LCD criteria, and Medicare/Medicaid compliance.

Our BPO outreach mission is to identify DME practice owners who are losing revenue to missed calls, drowning in manual follow-up work, or both, and position DMEDesk + GGO as a turnkey 24/7 revenue desk solution.

Core Value Proposition:

- Zero Missed Revenue: 24/7 inbound intake eliminates voicemail-driven churn
- Operational Scalability: Unlimited parallel calls during peak hours
- Compliance-First: HIPAA-secure with BAAs, TCPA consent management, and full audit trails
- Cost-of-Inaction Mitigation: Replaces high-turnover front-desk staff with consistent AI execution

2. Target Market & Prospect Segmentation

Every DME practice falls into one of three camps. Identifying the camp early lets us tailor the pitch and skip what doesn't apply.

Camp A: Missing Intake Calls

Patients call, get voicemail, hang up, and call the next supplier. Revenue walks out the door before the team even knows they called.

***Pitch angle:** "How many patients called you last month that you never knew about?"*

Camp B: Drowning in Manual Work

Resupply outreach, prior auth follow-up, delivery confirmations. Staff is buried in repetitive phone calls that should be automated.

***Pitch angle:** "What if your team never had to chase a prior auth again?"*

Camp C: Full Phone Replacement

Looking to replace the entire front-line phone system. Flag early as often out of scope and redirect to hybrid/front-line augmentation model.

3. Outreach Channels & Cadence

3.1 Cold Email Sequence (5-touch)

Touch	Day	Subject / Theme	CTA
1	Day 0	"Your front desk never calls in sick" - Pain intro	Book 15-min discovery
2	Day 3	Revenue leak stats - missed call cost calculator	Watch 2-min demo video
3	Day 7	Case study: DME supplier saved X hrs/week	Schedule live demo
4	Day 14	Prior auth automation angle	Reply to connect
5	Day 21	Breakup email - "Last note from us"	Final CTA

3.2 LinkedIn Outreach

- Connect request with personalized note referencing their DME practice
- Day 1 post-connect: Share a relevant DME industry insight (not a pitch)
- Day 3: Voice note or short message introducing DMEDesk concept
- Day 7: Share demo link or case study
- Engage with their content consistently to build rapport

3.3 Phone Outreach

Cold call script framework:

- Open: "Hi [Name], I work with DME suppliers who are losing revenue to missed patient calls..."
- Discovery: "How are you currently handling after-hours calls?"
- Bridge: "We built an AI receptionist specifically for DME - it handles intake, prior auth follow-up, and resupply calls 24/7."
- CTA: "Can I show you a 15-minute live demo where the AI actually calls your phone?"

3.4 Trade Shows & Events

- Medtrade (primary DME industry event)
- AAHomecare conferences
- State HME association meetings
- Live demo booth: Let prospects experience an AI call in real time

4. Demo Strategy: The 9-Stage Arc

Total demo time: ~34 minutes. Structured to move from discovery to a live call experience.

Stage	Time	Focus
01 - Open & Frame	~2 min	Set the context. Establish credibility. Confirm their pain camp.
02 - Discovery	~5 min	Ask targeted questions to uncover their biggest phone/intake bottleneck.
03 - Product Intro	~3 min	High-level positioning: Voice-first AI built for DMEPOS only.
04 - Features	~5 min	Walk through inbound intake, outbound automation, dashboard visibility.
05 - Integration	~4 min	Show PMS two-way sync, webhook capabilities, workflow handoffs.
06 - LIVE Inbound Call	~3 min	Call the prospect's phone with their configured AI. Strongest moment.
07 - Dashboard	~4 min	Show transcripts, AI summaries, auto-tasks, usage tracking.
08 - LIVE Outbound Call	~3 min	Demonstrate prior auth or resupply outbound call automation.
09 - Road Map & Close	~5 min	Implementation timeline, pricing, risk reversal, next steps.

5. Objection Handling Playbook

Objection	Strategic Response
"Patients hate robots"	Patients currently get voicemail or hold music. DMEDesk is an upgrade. Hybrid model available. A live AI is better than a silent voicemail box.
"We already have reminders"	Reminders are static texts. DMEDesk is a live call that verifies info and writes back to your PMS. Toggle off overlapping features.
"What about emergencies?"	Life-sustaining equipment calls are flagged and routed to on-call human staff immediately. Never handled by AI alone.
"Implementation is hard"	2-3 week go-live with white-glove onboarding included. Sandbox testing before any patient call.
"What if we cancel?"	Month-to-month. 15-day notice. 30-day money-back guarantee. No cancellation fee.
"We're too small"	After-hours model costs less than one missed patient. Even 5 recovered calls/month pays for itself.
"We need to think about it"	Every day without DMEDesk is missed calls going to competitors. The 30-day guarantee eliminates risk.

6. GGO + DMEDesk: The Combined Pitch

When pitching to DME owners, emphasize that GGO provides the human oversight layer while DMEDesk provides the technical velocity. You aren't just selling an AI - you're selling a 24/7 revenue desk that never calls in sick.

Model A: Full Human Oversight + AI

- GGO team monitors all AI interactions in real time
- Human escalation for complex cases within seconds
- Quality assurance reviews on every call
- Best for: Risk-averse practices, new to AI, high compliance requirements

Model B: AI-First + Human Backup

- DMEDesk handles 90%+ of calls autonomously
- GGO team available for escalation and edge cases
- Weekly performance reviews and prompt optimization
- Best for: Cost-conscious practices, tech-forward owners, high call volume

Key Messaging for BDOs:

- "We're not replacing your staff - we're giving them superpowers."
- "Every call that goes to voicemail is revenue walking to your competitor."
- "DMEDesk pays for itself with the first 5 recovered calls per month."
- "HIPAA-compliant from day one. BAA included. Full audit trail for accreditation."
- "Month-to-month. No lock-in. 30-day money-back guarantee."

7. Implementation & Onboarding Timeline

Step	Activity	Details
1	Demo	Live 34-min demo with prospect
2	Onboarding	1.5-2 hrs, white-glove, included in price
3	Configuration	System prompts, voice selection, PMS integration
4	Sandbox Testing	Validate AI behavior before any real patient call
5	Training 1	Team onboarding and dashboard walkthrough
6	Go-Live	Full deployment (after-hours, hybrid, or front-line)
7	30-Day Guarantee	Money-back guarantee window begins
8	Training 2	Post-launch optimization and prompt tuning

8. Outreach KPIs & Success Metrics

Metric	Target	Measurement
Emails sent/week	200-300	CRM tracking
Email open rate	>35%	Email platform analytics
Reply rate	>8%	Positive replies / total sent
Demos booked/week	5-8	Calendar bookings
Demo-to-trial rate	>40%	Trials started / demos completed
Trial-to-paid rate	>60%	Paid accounts / trials started
LinkedIn connections/week	50-80	Connection requests accepted
Cold calls/day	20-30	Dialer logs

9. Next Steps

1. Finalize prospect list segmented by Camp A/B/C
2. Set up email sequences in CRM with 5-touch cadence
3. Prepare LinkedIn outreach templates and connection scripts
4. Train BDO team on the 9-stage demo arc
5. Create cold call script cards with objection responses
6. Schedule first wave of outreach for Week 1
7. Establish weekly pipeline review cadence
